Black Ice Software - June 25, 2014

Printer Driver 14.07 is released!

New Debugging Option to speed up troubleshooting and improved **Post Printing** options when printing on **Citrix!**

Black Ice Software has released the Printer Driver version 14.07 with a **new Debugging option** to speed up troubleshooting, isolate printing problem, and isolate defective documents or inconsistent printing applications to provide a quicker technical support turnaround for customers.

*The **Debugging** option generates **DDF log files** that contain the input source data of what the Black Ice Printer Driver receives from the operating system. DDF log files can be used to compare the printed document with the source input document to isolate and to determine the cause of the problem.*

When contacting Black Ice Software in relation to a printing issue, it is highly recommended to attach a DDF log file of the print job where the issue occurs.

To Enable Debugging feature, go to the Control Panel > Printers and Devices > right click on the Black Ice Printer Driver > Printing Preferences > Filename Generation Tab > Troubleshooting... and check the Enable Debug Logging checkbox.

Once the **Debug Logging Feature is enabled, all the user have to do is print** to the Black Ice Printer Driver, and the DDF log file is generated into the specified directory. By sending the log to support, technical support turnaround time is significantly reduced.

Version 14.07 of the Black Ice Printer Drivers includes **improvements for using post printing options when printing on Citrix,** such as Upload to SharePoint, Send document in Email,
